

### In the Drawings

Please amend FIG. 6 as indicated in red on the attached copy.

### In the Claims

Please amend the following claims as indicated by deleting the bracketed portions and by inserting the underlined portions:

B3/B1/D1 1. (Twice Amended) In an integrated computer telephony system including a call routing system, a method for routing a call based on the identity of an originating source of said call, comprising the steps of:

maintaining a plurality of routing lists, each of said routing lists being associated with at least one originating source and each routing list comprising a plurality of directory numbers;

receiving said call from said originating source;

selecting a routing list associated with said originating source from said plurality of routing lists; and

directing said call sequentially to the directory numbers on [according to] said routing list.

B3  
C1D3  
5. (Twice Amended) In a program module responsive to receiving communications for a personal number subscriber, a method for routing a communication to said subscriber, comprising the steps of:

B4  
maintaining a plurality of routing lists, each said routing list being associated with at least one originating party and at least one personal number and each routing list comprising a plurality of directory numbers;

receiving a communication directed to a personal number from an originating party;

selecting a routing list associated with said personal number and said originating party; and

routing said call sequentially to the directory numbers on [in accordance with] said routing list.

B5  
14. 8 (Once Amended) The method of claim 11 [7], wherein said selecting a routing list step further comprises selecting said routing list from a group of routing lists identified for said originating party based on the day of the week said communication is received.

B5  
Amended  
15. ~~q.~~ (Once Amended) The method of claim ~~5~~<sup>1</sup> [7], wherein said selecting a routing list step further comprises selecting said routing list from a group of routing lists identified for said originating party based on the time of day said communication is received.

16. ~~q.~~ (Once Amended) The method of claim ~~5~~<sup>11</sup> [7], wherein said selecting a routing list step further comprises selecting said routing list from a group of routing lists identified for said originating party based on the day of the week and the time of the day said communication is received.

---

B6 B5 D4 11 (Twice Amended) A computer system for routing calls for a personal number subscriber based on the calling line identification of an originator, comprising:

a processing unit;

a memory storage device operative to store a plurality of routing lists for said personal number subscriber, each said routing list comprising a plurality of directory numbers;

a receiving interface device coupled to said processing unit for receiving calls;

a transmitting interface device coupled to said processing unit for placing calls;

said processing unit being operative to:

receive a call on said receiving interface device, said call being directed to said personal number subscriber;

detect a calling line identification for said originating party;

retrieve an associated routing list from said memory storage device for said calling line identification;

retrieve a default routing list from said memory storage device if said associated routing list does not exist; and

direct said call setup request sequentially to the directory numbers on [in accordance with] said routing list.

B7  
13. (Twice Amended) A computer-readable medium on which is stored a computer program for selecting a routing list and directing a call based on an identifying criteria, and a data file containing a plurality of routing lists for a called party, wherein each routing list comprises a plurality of directory numbers, said computer program comprising instructions which, when executed by a computer, perform the steps of:

receiving a communication for said called party;

obtaining said identifying criteria from said communication;

retrieving a routing list from said data file based on said identifying criteria; and

directing said communication sequentially to the directory numbers on [in accordance with] said routing list.

Please add new Claims 17 - 24 as follows:

B8  
17. (New) The method of claim 1, wherein said selecting a routing list step further comprises the steps of:

requesting said originating source to provide speech sample;

receiving said speech sample;

retrieving an associated routing list for said speech sample; and

retrieving a default routing list if said associated routing list does not exist.

18. (New) The method of claim 5, wherein said selecting a routing list step further comprises the steps of:

requesting said originating party to enter a speech sample;

receiving said speech sample;

retrieving an associated routing list for said speech sample and said

personal number; and

retrieving a default routing list if said associated routing list does not exist.

19. (New) In an integrated computer telephony system including a call routing system, a method for routing a call based on the identity of an originating source of said call, comprising the steps of:

maintaining a plurality of routing lists, each of said routing lists being associated with at least one originating source;

receiving said call from said originating source;

selecting a routing list associated with said originating source from said plurality of routing lists by

requesting said originating source to provide an identification code;

receiving said identification code;

retrieving an associated routing list for said identification code;

and

retrieving a default routing list if said associated routing list does not exist; and

directing said call according to said routing list.

20 (New) In a program module responsive to receiving communications for a personal number subscriber, a method for routing a communication to said subscriber, comprising the steps of:

*BS*  
*BC*  
*mt*

- maintaining a plurality of routing lists, each said routing list being associated with at least one originating party;
- receiving a communication directed to a personal number from an originating party;
- selecting a routing list associated with said personal number and said originating party by
- requesting said originating source to provide an identification code;
- receiving said identification code;
- retrieving an associated routing list for said identification code;
- and
- retrieving a default routing list if said associated routing list does not exist; and
- routing said call in accordance with said routing list.

21. (New) In a program module responsive to receiving communications for a personal number subscriber, a method for routing a communication to said subscriber, comprising the steps of:

maintaining a plurality of routing lists, each said routing list being associated with at least one originating party;  
receiving a communication directed to a personal number from an originating party;  
selecting a routing list associated said originating party based on the time of the call; and  
routing said call in accordance with said routing list.

22. (New) The method of claim 21, wherein said selecting a routing list step further comprises selecting said routing list based on the day of the week said communication is received.

23. (New) The method of claim 21, wherein said selecting a routing list step further comprises selecting said routing list based on the time of day said communication is received.

24. (New) The method of claim 21, wherein said selecting a routing list step further comprises selecting said routing list based on the day of the week and the time of the day said communication is received.

## REMARKS

Claims 1-16 have been rejected by the Examiner. By the present amendment, Claims 1, 5, 8 - 11, and 13 have been amended. No claims have been cancelled. New Claims 17 - 24 are presented for entry. Consequently, upon entry of the present amendment, Claims 1 - 24 will be
